

Jack

girsberger

Seat height

Use the lever under the seat on the right to adjust the seat to any height. Pull the lever up, then let it go as soon as the seat reaches the right height.

Proper care of Jack

All mechanical and movable parts of Jack require no maintenance. The cushions can be cleaned with a brush and a normal fabric cleaning agent. Nappa leather: Clean occasionally with well-diluted soapy water. Wipe off with clean water. Allow to dry, then polish with a woollen cloth. Do not use a cleaning agent or polish. If the chair is on a carpet, you should periodically remove the carpet fluff which can collect around the castors.

A word on safety

Jack is built based on international safety standards and requirements, as well as on Girsberger's years of expertise in office seating. Jack was designed as an office seat for one person. If the chair is put to any other use, Girsberger will not accept liability. Children should not be allowed to play in the vicinity of Jack without supervision. The pneumatic spring unit should not be exposed to heat or opened forcefully. Work on or replacement of the pneumatic springs may only be carried out by

trained specialists. The standard model comes with castors for carpet floors. Soft castors for hard floors, which are recognizable by the coloured ring on the outside rim, or glides for hard and soft floors are available as an option.

Guarantee

We provide a guarantee for all our furniture in line with statutory liability requirements. The term of the guarantee is based on the relevant terms and conditions of business. Upholstery materials, castors and glides are not included in the guarantee obligation.

Enjoy Jack by Girsberger!
